

# Bonded Warehouse Solution

## Bonded Warehouse Solution

A solution for Bonded Warehouse seamlessly integrated to SAP Business One

### Overview

SAP Business One currently allows allocation of additional costs only on GRPO and on complete quantities for items in the GRPO. It does not allow for clearing partial quantities and allocation only the applicable additional costs.

Bonded Warehouse Solution integrated with SAP Business One allocates additional costs for partially cleared items, supports different allocation method for expenses and posts the required financial entries eliminating multiple entries and errors, freeing up time and resources for business to focus on what is important and become more productive.

Bonded Warehouse Solution is applicable where an importer, either a manufacturer or trading business maintains Custom Bonded Warehouse and de-bonds the material as and when it is required by only paying the applicable costs levied for the items de-bonded.

Bonded Warehouse solution can also be used for Inventory Transfer where duties or freight needs to be allocated.

### Features

Allocate additional costs on inventory transfers including customs duties

Allocation of costs can be done either by individual/gross custom duty for item or by selecting the GL Account other than the account defined in the master setup

Support multiple methods for allocation of expenses including user defined percentage

Automatically creates the inventory revaluation

Supports Serial number and Batch controlled items

Integrates with CVD Solution, a solution component integrated to SAP Business One from New-Age

### Known Issues

- Does not support FIFO method for valuation
